Abstract (en)
[origin: WO9910063A1] A fall attraction for theme parks and fairgrounds comprises a seating carrier (7), a rail track (2) mounted on a tower or mast for guiding the seating carrier (7) and means (12, 13) for transporting the seating carrier to the uppermost section of the rail track. The rail track has a vertical or sloping fall section (8) over which the seating carrier is able to execute a free fall and a braking section, adjoining said vertical or sloping fall section, to bring the seating carrier to a standstill. In order to increase the attractive sensation and to improve safety, the braking section of the rail track has a safety section (9) which extends upwards and over which the seating carrier can be slowed down by an upward movement and can then fall back.
