Abstract (en)

[origin: DE19742367A1] According to the invention, the containers (B) with flatly piled letters (G) are placed automatically in a V-shaped receiving device (A) by initially placing the containers in a holding device (HV). A plunger (S) then holds down the letters (G), whereupon the holding device (HV) is positioned on the receiving device (A) so that the closed opening of the container (B) faces the bottom of the receiving device (A). The plunger (S) is finally raised and swung laterally so that the letters (G) can slide into the receiving device (A).
