Abstract (en)
[origin: WO9911544A1] The invention relates to an arrangement for a load carrier (1) in the form of a platform module so arranged as to be capable of being handled without restriction between transport positions, rail, road vehicle and boat, and which, on its underside, exhibits a number of legs (3) for setting up the load carrier on a base. The legs (3) are mounted so that they are capable of pivoting in internal spaces in the load carrier (1) respectively between a retracted and an extended position, and a locking device (8) is so arranged as to prevent unintentional retraction or extension of the legs (3) in question and thus to lock the legs (3) in the intended retracted or extended position.
