Abstract (en)

[origin: EP0905073A1] An automatic cutting and stacking device for arcuately shaped blanks is disclosed. The device contains a feeding table (1) followed by a cutting unit (2) and a stacking device. The cutting unit (2) is movable in relation to the feeding table (1) to thus allow a cutting perpendicular to the contour of the shaped film. The stacking unit comprises a slide plate (31) and a movable base plate (3) upon which the cut blanks are stacked. The height of the base plate (3) can be adjusted/lowered in relation to the accumulating thickness of the stacking height of the cut blanks. <IMAGE>
