Abstract (en)

[origin: DE19750496A1] The method involves detecting the mass of air using an air mass sensor (10). The air humidity and pressure are detected (20) simultaneously with the mass and evaluated in an evaluation circuit. The humidity and pressure are measured in an induction pipe (30), pref. next to the air mass sensor. The air mass and pressure sensors are micromechanical devices. An Independent claim is also included for a sensor.
