Abstract (en)
[origin: EP1018473A1] The upper outside surface (8) of a second main container part (5) facing away from the first main container part (4) defines a smaller assembly surface (9,9') for an additional container (3). The assembly surface (9) is arranged so that at least a first partial section (17) of its outline is formed by a part of the outline of the upper outside surface of the second container part whilst at least a second partial section (18) of its outline runs beyond the upper outside surface. First connectors (22) spread out along the outline of the assembly surface ensure that outer first connectors (22) associated with the first outline section (17) lie outside of the outline of the upper outside surface and at least inner first connectors associated with the second partial section lie inside the outline of the upper outside surface.
