Abstract (en)
The present invention has the object of a shape modification of the rear zone of a micro-terminal in order to allow a union to a wire in a plane lower than that of the support of the terminal in its cavity, when said terminal is in the interior of a connector, with the goal of making a co-planar union of two adjacent rows of terminals when same are situated in said connector, the rear zone of the terminal will be formed by a flat portion, extension of the front zone from which edges emerge the corresponding skirts, extending said flat zone in an elbowed zone which by its only free end extends as well another flat zone over which are placed the flexible and flat wires. <IMAGE>
