Abstract (en)

[origin: WO9916695A1] The invention relates to a method for erecting bodies (4) of a considerable height by means of a hoisting device, wherein in a lying position the body (4) is coupled at an intermediate position to a hoisting cable (8) of the hoisting device controllable by the lifting unit (7) and is lifted by the lifting unit (7). The invention also relates to a tripod hoisting device for erecting bodies of a considerable height, comprising a standing tripod (2, 3), a lifting unit (7) supported by the upper part of the tripod (2, 3), at least one hoisting cable (8) controllable by the lifting unit (7) and a lying base frame (1) for fixing the position of the tripod (2, 3).
