Abstract (en)  
[origin: FR2769334A1] The self-contained receiver (1) is connected to a panel (2) in one wall of the swimming pool which acts as a spillway. The receiver is more or less the same length as the panel and has a section to collect and store water from the pool. It is linked to a casing (4) containing a pump and filter which returns the water to the pool after treatment. The receiver is in two separate sections, an upper section (1a) connected to the spillway panel, and a lower (1b) which acts as a buffer tank, with a filter (3) between the two sections.
