Abstract (en)
[origin: DE19835197C1] The invention relates to a spectacles frame having branches (3) which are hinged at posts (2) of the side edges (4) of said frame in such a way that they can rotate relatively to a rotation axis (13) and which are fixed in their open position by means of magnetic holding forces. Said frame comprises at least one pair of magnetic elements (6a, 6b; 7a, 7b) which are placed outside the rotation axis (13) with elements arranged parallel to said axis. One element is placed in one of the branches and the other one is fixed on the associated post (2) of the frame edge.
