Abstract (en)

The present invention relates to an antistatic sole for shoes comprising a conducting element (7) which is mounted on an insole (3), a terminal (10) which is made of conducting material and connected to the conducting element (7), passing through the sole (2) and making contact with the ground by means of free ends (12). The terminal (10) consists of a carbon fibre which, during normal use of the shoe, is subject to substantially the same degree of wear as the sole (2). <IMAGE>
