Abstract (en)
A massager, in particular, of chair type capable of massaging in a vertical direction for massaging shoulders effectively, which is provided with a device body capable of supporting a user's body and a drive for massaging the users body supported by the device body. The massaging drive is provided with a pair of upper and lower massaging members which are disposed in a vertical direction of the user's body supported by the device body. The upper massaging member is directed downward to act toward the user, and the lower massaging member is directed upward to act toward the user. <IMAGE>
