Abstract (en)

A method of manufacturing a rubber tyre component and a method of manufacturing a tyre are disclosed, wherein the rubber tyre component has a joint surface (P2 or P3), and the method comprises the steps of: dividing the cross sectional shape (5) of the rubber tyre component into a plurality of winding regions (An,Bn), the divided winding regions including (a) a region which includes the whole of the joint surface (P2) or (b) a plurality of regions each including a part of the joint surface but collectively including the whole of the joint surface (P2); and winding a raw rubber tape (2) to fill the winding regions so that edges (2e) of windings of the rubber tape are in line with the joint surface (P2). <IMAGE>
