Abstract (en)

[origin: EP1020391A1] For balancing out length variations the strip(2) is guided around a diverting arrangement(5) which can be moved in the direction of the moving strip. The position of the diverting roll is continuously varied by an adjusting member(7) linked to a control unit according to the changing unwinding roll diameter. An Independent claim is made for the process equipment which includes a controlled adjuster(7) for the diverting roll(5), a system for measuring the diameter of the unwinding roll(1) and a control unit.
