Abstract (en)

[origin: EP1020392A2] The oppositely disposed runs of the conveyor belts(9,17) include an acute angle when viewed at right angles to the direction of transportation. At least one device for guiding and spacing change of the run of one conveyor belt relative to the other conveyor belt is provided at least in the working area of the ejector. At least one swinging arm pivots around an axis extending parallel to the running direction of the conveyor belts and on its free end has a guiding means for the run of the conveyor belt.
