Abstract (en)

[origin: EP1020394A1] The support structure (2) has suitably shaped secondary supports (9,10) on which the chain wheel assemblies (6) of the drive unit are fixed with detachable connectors. The central axial supports are fixed detachably on the support structure by screws. The central axis of the chain wheel assemblies is shaped so that it slides in the inner rings of the roller bearings (15) of the assemblies so far that these inner rings become accessible.
