Abstract (en)

[origin: EP1020574A2] The system assembly knotting point for the frame structure at the building side for the posts and transoms of a facade or skylight, where support sections are linked together, has a carrier (4) to hold and secure the ends of the ties (5-8) of the scaffolding frame, or to fix or form guides for the ties. The carrier (4) is between disks (16,17), which form a closed surface with the carrier apart from openings for the ties or the heads of locking screw bolts to hold them together. The disks (16,17) form covering caps round the carrier (4).
