Abstract (en)  
[origin: WO9918000A1] A container and lid (11) primarily intended for food use has a flange (13) extending at least around one of the container and the lid (11), but preferably has respective flanges (13) extending around both the container and the lid. A colour coded identifying device (10) is in the form of a generally U-shaped clip (17) and is connectable to the flange (13) of the container or the lid. The clip has a pair of arms (19) between which the flange (13) is received, at least one of the arms (19) defining an abutment face (21) which is engageable with a corresponding abutment (24) on the flange (13) so that when the clip (17) is connected to the flange, it is retained thereon during all normal use of the container and lid.
