Abstract (en)
[origin: WO9918280A1] An anti-yellowing finishing process for textile, blue-dyed, anti-back-stained, stone-washed and/or bleached denim articles is characterised in that the textile materials are finished in an aqueous medium with protonated fatty acid ester aminoamides and/or hydroxyaminoamides of N-(beta -hydroxyethyl)-ethylene diamine, in which the fatty acid radicals contain 12 to 22 carbon atoms, and which are protonated with at least 1.5 equivalents ortho-phosphoric acid per equivalent of basic amino groups.
