Abstract (en)

[origin: WO9919831A1] The invention concerns a terminal to be connected to a computer network (T) for managing products (6), such as watches, each equipped with an identifying element (8). The terminal comprises a sensor (7) provided with a device (70, 71) for reading the identifying element (8), and a device (72) for sensing complementary signals concerning the products (6) and transmitting them through the network (T), to a measuring device. The invention is applicable to quality control in distribution networks.
