Abstract (en)
[origin: DE19742851A1] The invention relates to a radiotransmission apparatus (1), including a mobile or wireless telephone, which permits simple guiding by the operator. Control functions can be called on the graphic interface of the radiotransmission apparatus (1). At least a first and a second operating modes (5, 10) are provided. All control functions that are callable in the first operating mode (5) can also be activated in the second operating mode (10). In addition, control functions that are not callable in the first operating mode can also be activated in the second operating mode (10). An operating mode (15) is provided whereby all control functions can be called with the radiotransmission apparatus (1).
