Abstract (en)  
[origin: WO9918713A1] The present invention relates to a communications system and a method for the same. The invention relates further to a method and an arrangement for paying calls and/or service, and an intelligent network. The method for paying calls in a telecommunications network is used in an intelligent network environment provided with user accounts for individual users. Said user accounts enable prepaid calls and/or an access to various services. The method comprises steps for accessing a loading service through a user interface operationally connected to the intelligent network, accomplishing a loading of a requested amount of balance into a user account of an individual user by means of the user interface and the loading service. The loading stage comprises steps of decreasing the requested amount from a record in the intelligent network indicating an amount of prepaid balance which said user has paid beforehand by buying a voucher or similar, said record being dedicated to said voucher or similar, and loading a corresponding amount of balance into the user account of the individual authorized user requesting the loading operation.
