Abstract (en)
[origin: EP1022011A1] The nozzle fitting for bubble-baths has air and water inlets (5,6) and a nozzle cap (4) containing at least one nozzle opening (14) for water and at least one nozzle opening (15) for air. The water jet emerging from the water-nozzle opening is directed at the air current emerging from the air-nozzle opening. A housing contains a hollow cylindrical nozzle body (2) whose wall contains air inlet holes (8). The hollow cylindrical distributor (3) inside the nozzle body forms an annular duct (11) whose external diameter is smaller than the internal diameter of the nozzle body. The nozzle body and distributor are closed by the cap.
