Abstract (en)

[origin: EP1022102A2] The slicer has a rotary motor-driven circular cutter-blade (3), a support-plate for the food being cut (2), and a switch unit (8) for switching the machine on and off. The distance between the plate and the cutting plane of the blade is set by means of a control (9) with turning knob (6) for adjusting the thickness of the slices cut. The control encloses the switch unit and comprises a locking switch.
