Abstract (en)

[origin: EP1022222A2] The binding tape removal appliance consists of a knife-box (3) placed over a coil (2) tied with binding tape. A knife-carriage (4) travels across the binding tape (1) and incorporates a lifting-wedge for the binding tape, and a cutter-tool (6) in the form of a knife, cutter-wheel or roller-blade operating in the vicinity of the wedge. The continuous forward thrust movement of the cutter-carriage causes it to travel over the width of coil .
