Abstract (en)

[origin: EP1022427A1] A door or window frame assembly (2) combined with a roller shutter housing (6) has the housing mounted on the upper cross-member (20) of the door or window fixed frame (4) so that the housing's inside wall (15) lies flush with a plane (21, 21A) passing over the inner face (22, 22A) of the fixed frame or opening frame (5). The lower surface of the housing is divided into two sections (18A, 18B) on different levels - one aligned with the lower surface of the external wall (10) and the other with the top of the fixed frame cross-member, with the shutter passing through a gap (19) between the two.
