Abstract (en)

[origin: EP1022582A2] A gate such as a tollgate in an expressway for vehicles equipped with an object detection system is disclosed, by which an erroneous operation of the mounted object detection apparatus can be prevented and through which the vehicles equipped with the object detection system can smoothly pass. The gate includes two partition walls which limit a passage. The positions of the front ends of the partition walls are separated in front and behind, or the front end of one or both of the partition walls has a structure for suppressing the frontward reflection of each radiated electromagnetic, optical, or acoustic beam incident on the relevant front end. <IMAGE>
