Abstract (en)
A traffic information system for a vehicle 10 is disclosed in which the vehicle 10 receives traffic information broadcasts from RDS-TMC and filters this information so that traffic information relevant to the position of the vehicle 10 is made available to a user. The controller 16 is arranged to determine the identity of a local transmitter A, B from an identity code included in its signals and then to determine the vehicle location using a look-up table in a memory 18 which relates the identity codes to the location of the transmitters A, B. <IMAGE>
