Abstract (en)

The invention relates to a broadcast receiver in which in response to broadcast content data added to a received FM signal, program data of digital audio broadcasting corresponding to the FM program content data are searched from a historical table of frequency data and program data of the digital audio broadcasting, and when the corresponding program data are detected, frequency data are extracted from the historical table, and a reception frequency is set to the extracted frequency data, so that the digital audio broadcasting is received. <IMAGE>
