Abstract (en)
[origin: US6558304B1] The invention concerns an apparatus for restoring the balance of the human body, consisting essentially of a platform (2) for supporting the subject to be treated and capable of being actuated with an oscillating movement. The invention is characterized in that said platform is power-driven and receives its oscillating movement about a central support axis (6), movement associated with a rotational reciprocating movement, the amplitude and the speed of both the oscillation and the rotation being adjustable and capable of being varied while the apparatus is being used.
