Abstract (en)
[origin: WO0010662A1] The present invention provides an interactive electronic, digital device (16), largely an amusement device, including a display (20) of animated characters with sound effects housed in a unit (19) to be worn or carried by a wearer or user. The characters and sound effects are interactive with the wearer or user, for example, in response to wearer or user movement or selective actuation (e.g., through a button or touch panel). The interactivity could also be responsive to ambient sounds (e.g., music or voice) or movement.
