Abstract (en)

[origin: WO9919153A1] Door assemblies contain compression molded skins (1, 4) and separately manufactured door light frames, panels, and/or plant-on molding (10) comprised of a thermoset material wherein the separately molded members display substantially the same stainability, gloss, texture, etc., as the compression molded skins (1, 4), and are further strippable without damage to the member. The non-integral door elements may be adhesively bonded to the surface onto which they are affixed.
