Abstract (en)

[origin: DE19743621C1] Primary alcohols with 4-16 carbon atoms, or with 8-22 carbons and branched in the 2-position, are oxidised with molecular oxygen at 20-120 deg C in the absence of solvent by contact with a special catalyst containing palladium, platinum, cobalt or ruthenium and a cocatalyst containing bismuth or antimony on an aluminium oxide or Al silicate support.
