Abstract (en)

[origin: DE19742865C1] Thermosetting moulding materials (TMM) for the production of moulded parts for direct electrophoretic coating, containing curable resins, 5-25 wt% coke with a particle size of not more than 0.3 mm and 3-20 wt% carbon black, plus fillers and additives, etc.. Also claimed is a process for the production of electrophoretically coated mouldings by mixing the above components to a homogeneous mass, moulding and curing as usual, degreasing the moulding and coating directly by an electrophoretic process.
