Abstract (en)

[origin: DE19742867C1] Thermosetting moulding materials (TMM) for the production of conductive moulded parts for direct electrostatic powder coating, containing curable resins, 5-30 wt% coke with a particle size ≥ 0.3 mm and 1-20 wt% carbon black, plus fillers and additives, etc. Also claimed is production of electrostatically powder coated mouldings by mixing the components to a homogeneous mass, moulding and curing as usual, degreasing the moulding and electrostatically powder coating directly.
