Abstract (en)

[origin: FR2769609A1] The lock (1) consists of a locking bolt (10), which slides within the box (16) and has a central hollow core (200), to cooperate with a striker (201), fitted solidly into the door frame (2). The mechanism is fitted to displace the bolt towards the extreme locked position, in which it is engaged in the door locking plate (20). An operating arm (15) controls the withdrawal of the bolt. The box also contains the device (7) to adjust the position of attack of the bolt Used for lift doors
