Abstract (en)
[origin: WO9919615A1] An actuating device has an actuating element (12) and an actuating drive (11). Said actuating drive has at least one electromagnet with a coil (113), a moveable retaining plate (117) and at least one spring (118a, 118b) which prestresses the retaining plate into a predetermined neutral position (R). The coil generates a retarding field whilst the retaining plate moves away from the coil for a predetermined period of time (T2).
