Abstract (en)
[origin: EP1023941A2] With a change in operating conditions the number of beater plates(12) is adapted to the supply gas volume flow crucial for the drying in a way that while maintaining the dimensions of the beater wheel the number of plates is greater when the volume flow is increased and less when the flow volume is decreased. Alternatively, the profiling of the beater plates may change while the dimensions and number of beater plates remains unaltered.
