Abstract (en)

[origin: EP1024103A1] The method involves a detection arrangement (5) automatically reading data (6) from an information source (1) carried by the lift user and a processing unit (9) connected to the detection unit providing a variable destination to the user after detecting the individual characteristics of the user. The lift user can select his own individual requirements regarding the type of destination default, whereby the selected type of destination default applies until the next selection.
