Abstract (en)

[origin: EP1024186A2] The telescopic chute has a filler pipe (4) within an outer slidable pipe (5), and a sealing arrangement (10) between the two pipes. The sealing arrangement comprises an elastic deformable seal (11) and a compression unit (12) with a drive (13) which is preferably hydraulic. The telescopic chute has a filler pipe (4) within an outer slidable pipe (5), and a sealing arrangement (10) between the two pipes. The sealing arrangement comprises an elastic deformable seal (11) and a compression unit (12) with a drive (13) which is preferably hydraulic. During location on the charge-hole, the outer pipe is freely adjustable to accommodate height variations; operation of the hydraulic compression unit then squeezes the seal to close the annular gap between the pipe sections before the coal filling is started.
