Abstract (en)
It is a problem in known window lift mechanisms in which a window clamp is carried at a distance from a cable guide that any movement of the window clamp is directed around the cable guide with undesirable consequences. A window lift mechanism is disclosed in which a centre of gravity (72) of a window clamp 44 is arranged in line with a cable guide 48 and a guide rail 46 so any movement of the window clamp is directed towards the cable guide rather than around the cable guide. <IMAGE>
