Abstract (en)
A housing (2) of a vehicular shift lever according to the present invention has a) a plate (10) having characters for denoting position of the vehicular shift lever, the plate having a first side that is substantially in parallel with a direction of movement of the vehicular shift lever; b) a receiving portion (13) for receiving therein the plate, the receiving portion being configured such that, when the plate is received in the receiving portion, the plate is mounted on an inner surface of the housing; and c) a first supporting portion (20) for supporting thereon the first side of the plate, the first supporting portion being formed of a plurality of first projections (20) arranged on a first side of the receiving portion, the first side of the receiving portion being substantially in parallel with the direction of movement of the vehicular shift lever. In this housing, the plate has on the first side thereof a plurality of first cut-outs (40), each first cut-out having a size relative to a respective one of the first projections of the receiving portion such that at least a part of each first cut-out is allowed to be occupied by at least a part of the respective one of the first projections when each first cut-out is mated with the respective one of the first projections in order to bring the plate into the receiving portion. With this, the plate can be easily mounted on the housing.
