Abstract (en)  
[origin: EP1024336A2] The drying plant incorporates a drying chamber (1) containing a ventilator (4), at least one air-passage and reverse air passage (6,7) are between an inner compartment (2) of the drying chamber, and its outer environment. An air circulation path in the drying chamber leads from one side of the ventilator through the drying compartment and back to the other side of the ventilator. A partition (11) protruding into the air circulation path is between the two air passages. A damper register (8) is connected to at least one air passage.
