Abstract (en)
A data handling system particularly for a coin-operated entertainment machine has a base module (1) mounted in the machine and a series of output interface modules (7-9) selectively connected to the base module (1). The output interface modules (7-9) act to supply data collected from the machine to external data reading equipment. By appropriate selection of the interface modules (7-9) different kinds of machines and systems can be accommodated. <IMAGE>
