Abstract (en)
[origin: WO921523A1] A device is provided for transferring a patient from a first to a second surface, comprising a sheet of flexible material (such as fire resistant woven nylon fabric), having first and second opposed longitudinal edges, for bearing the patient during the transfer operation, at least one handle disposed generally at each said longitudinal edge for enabling an operator to transfer the device bearing the patient from the first to the second surface, and at least one handle intermediate the said longitudinal edges, for facilitating the said transfer operation and for facilitating the removal of the device from beneath the patient once the transfer operation is complete.
