Abstract (en)
[origin: WO9915328A1] There is disclosed apparatus for manufacturing a bead sub-assembly comprising an upper mould plate (10) and a lower mould plate (12), at least one of said upper and lower mould plates being moveable so that the plates can cooperate to define a mould cavity (14) substantially corresponding to the shape of the sub-assembly and delivery means (32) for delivering a desired quantity of a mouldable composition (18) to the mould cavity.
