Abstract (en)

[origin: WO9920958A1] Method for operating a refrigeration system (20) by means of a refrigerant circuit, in which to condensate the refrigerant in said circuit a cooling water circuit is used, incorporating an evaporative condenser (6), evaporation losses from said condenser (6) being topped up with the aid of make-up water being supplied to the condenser (6) via a heat exchanger (21) with the aid of which the liquid refrigerant of the refrigeration circuit (20) is subcooled.
