Abstract (en)
[origin: WO9922274A1] The present invention provides an image-recording transparent film having a toner-fixing layer which shows an improved compatibility with a toner resin, and capable of forming a color image of high quality. An image-recording transparent film comprising a transparent substrate and a toner-receiving layer provided at least on one major surface of the substrate, the toner-receiving layer comprising a light-transmitting resin having a softening point of 90 to 180 DEG C, and from 0.1 to 40 parts by weight of an amide nonionic surfactant based on 100 parts by weight of the light-transmitting resin which surfactant is in a compatible state with the light-transmitting resin.
