Abstract (en)
Armrest for a chair or the like. This armrest can move with the arm of the user. For this purpose, it is composed of various parts which are pivotably connected to one another. The pivots are formed by rubber-elastic hinges which give the armrest a preferred position. The design is such that, when the arm support moves forwards for the user it also moves upwards over part of this movement. Armrest and chair provided with an armrest of this nature. <IMAGE>
