Abstract (en)

A high temperature resistant masking device comprising a substrate having a top surface and a bottom surface, with an adhesive applied to the bottom surface of the substrate for removable attachment of the masking device to a surface to be masked. The masking device includes a transparent substrate with a plurality of markings embossed or printed on the top surface of the substrate to facilitate accurate placement and precision alignment of the masking device on the masking surface. The masking devices are die-cut from sheet material into various shapes and sizes, and placed on a release liner so that they may be readily applied to the surfaces of various parts requiring masking during liquid coating, powder coating, plating or electroplating. <IMAGE>
